SUMMARY

Computer Engineering graduate with hands-on experience in prototyping, troubleshooting, and applying engineering principles to real-world challenges. Fast learner with a genuine interest in exploring emerging technologies and improving performance through data-driven analysis. Highly competitive and self-motivated, always seeking to sharpen technical skills and exceed expectations. Known for strong critical thinking, resourcefulness, and an inquisitive mindset.

SKILLS

Soft Skills: Communication, Attention to Detail, Time Management, Teamwork, Adaptability, Problem-Solving, and Professionalism.

Technical Skills:

- **Languages:** Python, C, C++, Java, JavaScript, HTML, CSS (Bootstrap), SQL
 - **Tools and Platforms:** MATLAB, VS Code, Jupyter Notebook, Git, GitHub, Linux, Figma, Excel
 - **Database:** MySQL, PostgreSQL, Firebase, pfSense
 - **Others:** Data structures and algorithms, Version Control, AI Fine-tuning, Dataset Preparation
-

EXPERIENCE

Salesrain BPO | IT Intern March 2025 - May 2025

Managed firewall configurations using pfSense, provided technical support to BPO employees, and conducted audits on systems and peripherals to ensure compliance and security. Configured VLAN settings for network segmentation and handled email correspondence to resolve support inquiries efficiently.

PROJECTS

CLEARSPeak | Thesis Jan 2026 - April 2026

A portable, edge-computing assistive device designed to provide real-time vocal correction for individuals with cleft lip and palate. Built on a Raspberry Pi 5 paired with an Arduino Nano, it processes all audio entirely offline using a fine-tuned Whisper AI speech recognition model and a Piper TTS engine.

Barangay System | Web Jan 2026 - March 2026

A web-based platform that enables residents to request documents online with automated SMS/email updates upon completion. It streamlines department workflows for healthcare and SK, sends targeted group announcements (e.g., 4Ps, PWDs), and gives the Barangay Captain real-time oversight through activity audits.

Garbage segregation | Robotics Aug 2025 - Sept 2025

Powered by a custom YOLO11 computer vision model, our smart waste segregation system detects and classifies garbage in real-time into biodegradable, non-biodegradable, and recyclable categories using a live camera feed. Once an item is identified, the system automatically opens the correct bin lid to ensure seamless, hands-free, and accurate waste sorting. This project won 1st place in the Robotics Category at the SDG Tech Innovation Challenge Fair.

EDUCATION

Bachelor of Science in Computer Engineering | Aug 2022 - Jun 2026

University of Cebu - Main

- Breadboarding Representative during Regional CPE Challenge 2023
- Breadboarding Representative during Regional CPE Challenge 2024
- Sumobot Third place during RACCETCON 2024
- Sumobot Champion during the CPEYESTA 2025

Senior High School - General Academic Strand | June 2018 - March 2020

University of Visayas - Main
